

In the book, Molly imagines some different ways to help Bea fly.  
Do you think any of them could work? Why or why not?  
Design your own structure to help Bea fly:

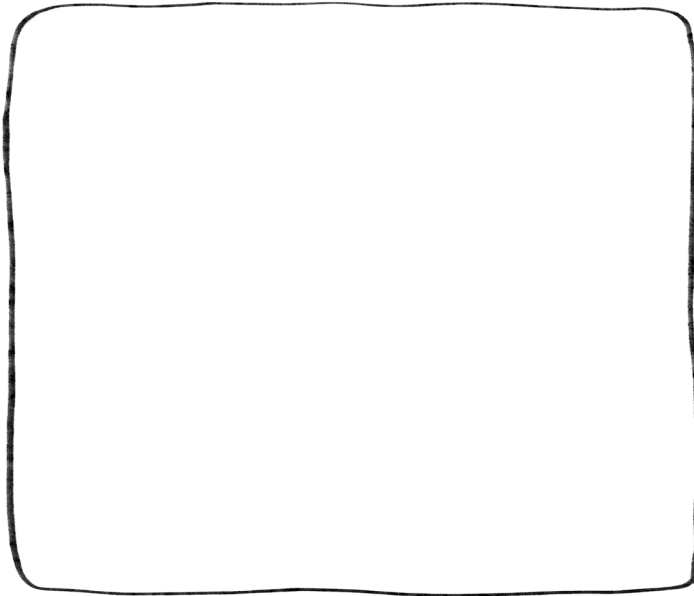

## Create your own pipe cleaner bee!

### MATERIALS NEEDED:

- 1 yellow pipe cleaner
- 1 black pipe cleaner
- 1 white pipe cleaner (*optional, if you want your bee to have wings*)
  - 2 googly eyes
  - glue to attach eyes
- something to wrap the pipe cleaners around (*pencil, marker, etc*)
- scissors to trim pipe cleaners

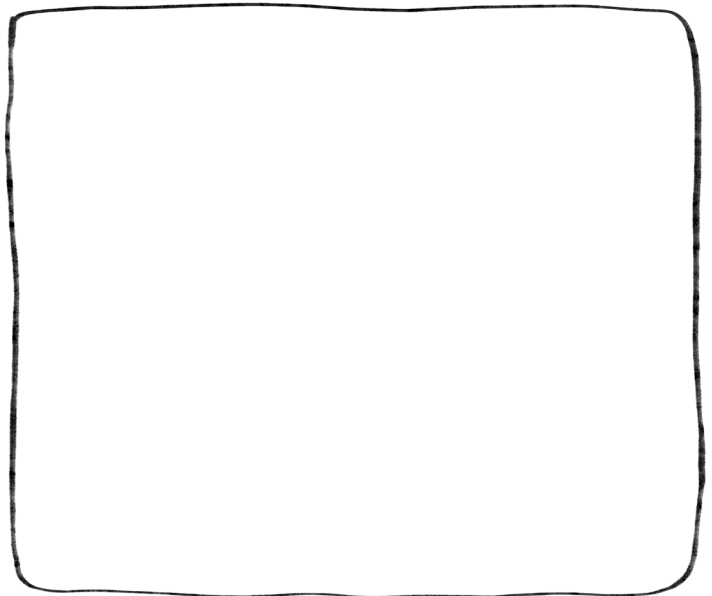

Bees need flowers because they provide food (pollen and nectar).  
Have you noticed which flowers bees like where you live?  
Do they visit one type of flower more than another?

I see bees on this flower:

Do you see any of these flowers where you live?

CROCUS

DANDELION

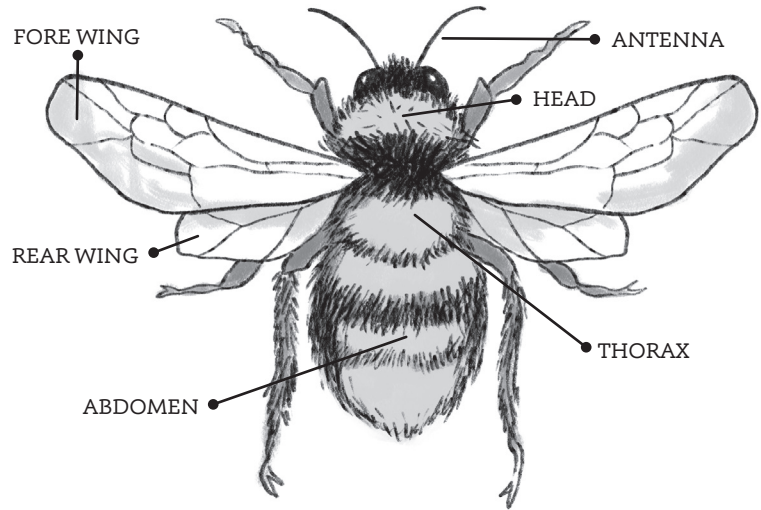

PUSSY  
WILLOW

SNOWDROP

In the natural world  
bumblebee wings  
look like this:

But in our *imagination*, they can look *however we want!*  
Draw some wild and fantastical wings for Bea:
